Cindy,

Just as a clarification, this comment was from the State of Utah Office of Energy Development, not UDEQ. As far as we are aware, UDEQ still supports us proposing a FIP for controlling existing sources on the U&O Reservation sooner rather than later, based on their statements in the stakeholder meetings and subsequent discussions with leadership and staff.

Thanks for sending, Dee.

A couple of interesting statements from UDAQ:

1) It is crucial that the ICMNSR and FIP provide timely and cost-effective permitting solutions that do not unfairly disadvantage oil and gas sources. *Accordingly, the EPA should not finalize its ICMNSR and FIP until it has a regulatory solution in place, such as a permit by rule program, to allow for streamlined permitting of oil and gas development under non-attainment scenarios ...* could we cite to this as support from UDEQ in our Fed Register notice?

2) Along with updated science and a dramatically different marketplace, oil and gas production and controls have changed substantially since the last inventory was conducted a decade ago. To reflect these changes, an updated inventory of emission sources would ensure that effective and least-cost approaches are properly assessed. *The EPA should complete an updated emission inventory before imposing significant new retrofit costs on industry.* ... Does UDAQ support this reservation-specific FIP proposal timing?

Hi there,

Just an FYI, thought you all would be interested.

Take care,

Dec

In addition to the Ute's comments, you guys should be aware of these too from Utah.
